## PROFESSIONAL SUMMARY

Computer Engineering graduate with 4 years of hands-on experience in AI, embedded systems, and full-stack web development through academic projects and internships. Skilled in Python, Next.js, React, and Node.js, with a strong foundation in building AI-powered applications and IoT systems. Active in technical workshops and mentorship programs, with a track record of quickly learning new tools and contributing to collaborative projects. Quick to learn emerging technologies and deliver scalable, user-focused, and impact-driven solutions.

## EDUCATION

### University of Rizal System, Morong

Morong, Rizal

BS in Computer Engineering (GPA: 1.53)

2022-2026

- Organizations/Awards: Department of Science and Technology – Science Education Institute Scholar, Association of Concerned Computer Engineering Students, DOST-SEI START Member, Best in Research Pitch Hard Hat Awardee, Necklace Awardee, Ring Awardee, Top 1 Class of 2022-2026

## EXPERIENCE

### AI Generalist, Consultant

Remote

Outlier, Scale AI

July 2026 – Present

- Worked as an AI Generalist for Outlier, evaluating and improving AI model outputs across domains - coding, reasoning, writing through structured prompt-response assessment and human feedback.
- Reviewed and rated AI-generated responses for accuracy, coherence, and safety, completing 5 tasks/projects and contributing to reinforcement learning from human feedback (RLHF) pipelines for 2 LLM providers/clients.
- Collaborated with a distributed team of subject-matter experts to refine prompt quality and edge-case handling, helping improve model performance on code generation, logical reasoning, and factual accuracy.

### Full Stack Developer Intern

Ortigas Center, Pasig City

South Asialink Finance Corporation

June 2025 – July 2025

- Developed and deployed a Meeting Room Scheduling System as sole developer, replacing manual scheduling and reducing booking conflicts by an estimated 70–80%, significantly improving office coordination.
- Implemented backend logic and database integration to handle concurrent bookings and prevent double reservations, building scalable RESTful APIs integrated with MongoDB and SQL for consistent, efficient data handling.
- Built with Next.js, Tailwind CSS, Shaden/UI, MongoDB, SQL, Nginx (deployment), and Postman (API testing) — saving employees an estimated 2–3 hours/week previously spent on manual scheduling and coordination.

## PROJECTS

### Project Lead, Full Stack Developer

University of Rizal System

SARIONE Artificial Intelligence System

October 2025- March 2026

- Led a 4-person team in the end-to-end development of SARI-ONE, an AI-driven system for real-time fish species classification and freshness evaluation, piloted at 3 fish markets in Rizal.
- Engineered a MobileNetV2-based CNN with Multi-Task Learning, achieving 98% classification accuracy across 120 fish species and 99% freshness detection accuracy (Fresh/Moderately Fresh/Spoiled), automating a previously manual sorting process.
- Deployed a non-destructive freshness assessment module on Raspberry Pi 5 with AI Hat+ and RPi Camera, delivering a working hardware-software prototype presented to vendors.

### Full Stack Developer

Door of Faith Church Phils.

Worship Lyrics Presenter

December 2025- February 2026

- Led a 4-person team in the end-to-end development of SARI-ONE, an AI-driven system for real-time fish species classification and freshness evaluation, piloted at 3 fish markets in Rizal.
- Engineered a MobileNetV2-based CNN with Multi-Task Learning, achieving 98% classification accuracy across 120 fish species and 99% freshness detection accuracy (Fresh/Moderately Fresh/Spoiled), automating a previously manual sorting process.
- Deployed a non-destructive freshness assessment module on Raspberry Pi 5 with AI Hat+ and RPi Camera, delivering a working hardware-software prototype presented to vendors.

### AI Engineer

Freelance Project

GuluGod Posture - Scoliosis Detection App

April 2025- June 2025

- Engineered an automated scoliosis screening mobile app using React Native (Expo) and an Express.js backend, enabling real-time spinal health assessments via mobile camera that perform simultaneous landmark detection and automated Cobb angle measurement.
- Implemented geometric algorithms to calculate spinal curvature degrees, categorizing severity into four distinct levels: Normal, Mild, Moderate, and Severe.
- Designed a high-interactivity UI providing real-time spine curve visualization and analysis overlays for both front and back camera modes.

### Embedded System Engineer

Freelance Project

Sentry – Smart Automated Machine Prototype

January 2025- March 2025

- Engineered an automated target-tracking system with X-Y servo control and multi-mode gel gun integration for precise operations.
- Implemented real-time object detection and motion tracking algorithms to improve responsiveness and accuracy.
- Conducted prototype testing and optimization, enhancing system reliability and operational efficiency.

### Full Stack Developer

Freelance Project

IoT-Based Home Automation Prototype

January 2025- March 2025

- Created a voice-activated smart home system enabling appliance control through Blynk app and Alexa integration.
- Developed real-time monitoring and automated triggers to improve convenience and energy efficiency.
- Applied embedded systems and IoT protocols for reliable and scalable home automation.

Full Stack Developer

URSM Academic Library Prototype

- Created a voice-activated smart home system enabling appliance control through Blynk app and Alexa integration.
- Developed real-time monitoring and automated triggers to improve convenience and energy efficiency.
- Applied embedded systems and IoT protocols for reliable and scalable home automation.

Freelance Project

January 2025- March 2025

LEADERSHIP EXPERIENCE

Youth Department Vice-President Internal

Door of Faith Church Inc., and Bible School Philippines

- Coordinated internal operations and administrative tasks, ensuring seamless communication and organization among youth members.
- Developed and implemented engagement initiatives that increased participation in church and school programs by fostering collaboration and team spirit.

Third Year Representative

Association of Concerned Computer Engineering Students (ACCESS)

- Spearheaded the planning and execution of large-scale engineering events, managing timelines, resource allocation, and cross-functional team coordination to meet strict deadlines.
- Facilitated communication between 100+ students and executive leadership, streamlining feedback loops to improve organizational transparency and project outcomes.
- Optimized event workflows by implementing structured planning phases, resulting in successful high-impact initiatives like Engineering Week and membership seminars.

CORE SKILLS

|                                            |                                                                                                                               |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Programming & AI Augmented Development     | Python, C/C++, JavaScript, React.js, Next.js, Node.js, Full-Stack Development, SQL                                            |
| Artificial Intelligence & Machine Learning | TensorFlow, Scikit-learn, TensorFlow Lite, Edge Impulse, Computer Vision, Pre-trained Model Deployment                        |
| Data Analytics & Visualization             | Python (Pandas, NumPy, Matplotlib, Seaborn), Tableau, Power BI, Excel, Data Cleaning, Statistical Analysis, Business Insights |
| Embedded Systems & IoT                     | Arduino, ESP32, Sensors & Actuators, Servo & Motor Control, Rapid Prototyping                                                 |
| DevOps & Tools                             | Docker, Git/GitHub, Linux, VS Code, VirtualBox, Vercel Deployment, Nginx, Postman                                             |
| Design & Creativity Tools                  | Canva, Figma, UX/UI Prototyping, Frontend Styling, Lovable                                                                    |
